

# **Advanced Techniques For Mobile Radiocommunications**

Organized by

**Samir SAOUDI, Professor at ENST-Bretagne, France**

As the available radio spectrum is limited, higher data rates communications services (UMTS, HSDPA,...) can be achieved only by designing efficient techniques. This session will give some recent research activities in digital communications which has shown large gains in capacity over wireless channels : Space time coding, turbo equalization, MIMO channels, OFDM/CDMA techniques...
